Bio Below:

William A. Burnett Jr. (Twan)

Educator | Author | Media Director | Family Man

William Antione (Twan) Burnett Jr. is a man who wears many hats, but they all fit a single mission: building a lasting legacy for his family, his community, and the next generation. Based in Independence, Kansas, William is an automotive instructor, a published author, a media director, and a dedicated coach who has spent his life turning challenges into triumphs.

From the Shop to the Classroom

William's professional journey is rooted in a deep love for how things work. After earning his Associate of Applied Science degree in Collision Repair in 2014, he jumped straight into the entrepreneurial world. He founded and ran a highly successful collision repair shop, **All In Autobody**, which he operated for five years. His reputation for sharp execution later led him to ST Engineering's Hackney Division, where he served as a plant supervisor overseeing their entire body and paint division.

Today, William has pivoted his decades of real-world expertise into a role as an Automotive Technology Instructor at **Coffeyville Community College**. In the classroom and the garage, he is passionate about mentoring the next generation of technicians, teaching them that success in the trade is built on pride, patience, and attention to detail.

Media Leadership & The Creative Arts

Beyond the garage, William's creative talents run deep. As a youth, he learned to play nine different instruments and studied formal art programs. He spent years in the music and fashion worlds, producing projects and even designing custom clothing from his living room.

That lifelong creative drive has evolved into high-level media leadership. Today, William serves as the **Chief Article Systems Director for Writers Legacy Team Magazine (WLT+MAG)** and is a key figure within **Famo Nation Distribution**. In these roles, he helps manage global media infrastructure and direct television and digital media distribution across the Roku network. He brings a simple but powerful standard to everything he produces: build a clean, permanent digital footprint and aim for a zero-percent failure rate.

Authoring the Future

In 2026, William merged his passion for teaching with his love for writing by publishing his first book, **"We Checked the Fluids."** Written specifically for kids and families, the book is an easy-to-read, beautifully structured guide that breaks down the basics of keeping a vehicle running safely. It is his way of making automotive literacy accessible to everyone, starting at an early age.

"Whether I'm explaining gear ratios to a college student, writing a book for kids, or directing a digital media broadcast, the goal is always the same: keep the structure solid, and build something that lasts."

Family, Faith, and Grit

At the heart of everything William does is his family. Together with his wife, Kelli (whom he has been with since 2005 and married since 2011), he has raised four boys. His path hasn't always been easy. In the early days of starting their family, William fought through a year of homelessness and overcame major health scares. Those hard times only solidified his commitment to giving back.

For ten years, William poured his spare time into coaching youth football and basketball, guiding young athletes both on and off the court. Whether he is in the teaching lab, the media studio, or at home with his family, William operates with heart, grit, and a dedication to leaving the world a little better than he found it.
